

SEE HOW XFERALL

Can Work for California's Hospitals and Behavioral Health Partners

As hospitals deal with staff shortages and patient surges, emergency department boarding times are increasing. Patients with acute psychiatric issues are waiting in hospital emergency departments for three to five days or more before being admitted to an inpatient behavioral health facility.

Automation and collaboration help drive solutions to address barriers to care.

XFERALL eliminates long wait times for care and staff burdens.

XFERALL is a community network that empowers hospitals, community behavioral health agencies, EMS, law enforcement, school systems, mobile crisis teams.

XFERALL brings together referral sources to collaborate to improve patient access to behavioral health and specialty care.

Hospital Council

Northern & Central California

“XFERALL’s platform streamlines the challenging and time-consuming process of transfers for patients in need of behavioral health services, alleviating laborious administrative burdens and delivering clinically appropriate treatment much more quickly.”

California

Endorsed as a preferred solution partner by the Hospital Council - Northern & Central California

XFERALL and California hospitals will work together to deliver solutions that address the serious challenges of crowded emergency departments, clinician burnout, and delays in care. XFERALL reduces patient transfer times consistently by 80 to 90 percent across the network and is aligned with the National Guidelines for Crisis Care and SAMHSA best practices.

“The Hospital Council selected to endorse XFERALL because it provides a straightforward, practical solution to a longstanding – and during this pandemic, worsening – problem of lack of timely access to behavioral health services,” said Bryan J. Bucklew, president & CEO, Hospital Council - Northern & Central California.

Faster Placement. Improved Outcomes. Reduced Staff Burden.

XFERALL equips clinicians with a simple & easy-to-use platform that simultaneously beacons one request for placement to as many behavioral health facilities as the clinician chooses to ensure clinical appropriateness of treatment.

XFERALL reduces patient transfer times by 80% to 90% with an automated, real-time, collaborative communications platform that expedites patient transfers, resulting in improved timeliness and quality of care.

XFERALL facilitates real-time communication among all providers and facilities.

XFERALL provides a historical record of all patient transfer requests and tracking and measurement of response and placement times and reasons for patient denials from facilities to inform process and operational improvements.

THE RESULTS SPEAK FOR THEMSELVES

Decrease Waiting Times

Reduction in the time from initial transfer request to inpatient acceptance for behavioral health patients.

Improve Placement Time

Behavioral health patients are placed in an appropriate care facility in under three hours.
